

# Formula Student Vehicle engineering

Dear students,

You are a team player? You have a sense of responsibility? You are motivated for a unique project?

For our project, building a formula student prototype – racecar, **we want you!**

A group of three up to six students can be a part of us. You can choose between drivetrain, management, suspension, electronics and monocoque. For each project special skills are necessary.

Some roughly skills with Catia V5 are desirable for drivetrain, monocoque and suspension. If the group want work together in an assembly, the whole team should have the same skills.

For example, the students have knowledge in structural mechanics or have the same interests and experiences in dealing with the processing of carbon fibre reinforced plastics.

Then they would work in monocoque assembly.

Our team is structured like a company. We have executives, departmental managers and employees. You want to learn more about us? This is your chance!
